

FUN FACTS

ABOUT

CONTACT LENSES

1 You can recycle your old contact lenses at GHF

Instead of throwing your old lenses in the garbage, you can recycle your contact lens packages and your used lenses in our specialty recycling bin at Glasses Half Full.

Cardboard contact lens boxes can be put in standard recycling!

2 Avoid throwing contact lenses down the sink or the toilet

They cause microplastics to accumulate in our water supply. If you are unable to recycle your contacts, throw them in your bathroom garbage.

3 GHF offers a contact lens performance exam when your prescription is expired!

In this visit, we'll make sure the fit of your new supply is still great, and make tweaks to your prescription if necessary! And we always make this visit worth your while with perks like complementary solution, trial lenses, & locally-roasted coffee!

A contact lens prescription is different than a glasses prescription because they sit on your eye and glasses sit about 15 mm in front of it!

4 GHF has great warranties on contact lenses

Contact lenses purchased at Glasses Half Full are always warranted for damage (including torn edges) and for changes in prescription within 1 year of purchase!

5 A wide range of contact lens parameters exist for everyone

You should never have to tolerate discomfort or poor vision in your contacts. If you do, you should schedule a follow-up visit at Glasses Half Full right away so we can help you resolve your concern.

It is best to avoid contact lens wear if your eyes are red or irritated.

6 Sleeping in contacts is unsafe

When your eyes are open during the daytime, oxygen from the air dissolves through a contact lens and allows your eye to breathe! Sleeping in contacts is unsafe because there is much less oxygen availability with your eyes closed.

7 Always wear sunglasses over your contacts on a sunny day!

Or if you experience light sensitivity, Transitions contact lenses are available that darken when you are outdoors.

We even offer **25% OFF a pair of non-prescription sunglasses** at GHF (within 3 months of purchasing an annual supply of contacts) to ensure your eyes stay as protected as possible!
